(Courtesy of Wendie A. Berg, MD, PhD, Lutherville, MD.) Across prior series, 97 (36%) of 270 complex cystic and solid lesions proved malignant (Table 6). In the ACRIN 6666 protocol, 19 (0.7%) of 2659 participants had such lesions on the initial screening, as did 42 (1.6%) of 2662 participants over the 3-year protocol, with 45 such lesions ...

Cystic Breast Masses and the ACRIN 6666 Experience

Mammography (also called mastography) is the process of using low-energy X-rays (usually around 30 kVp) to examine the human breast for diagnosis and screening. The goal of mammography is the early detection of breast cancer, typically through detection of characteristic masses or microcalcifications. . As with all X-rays, mammograms use doses of ionizing radiation to create images.

Mammography - Wikipedia

Invasive ductal carcinoma not otherwise specified, also known as invasive carcinoma of no special type, is the most common type of breast cancer (70-80%) 5.It is an infiltrating, malignant and abnormal proliferation of neoplastic cells in the breast tissues.

Diagnostic mammography is for women with a sign or symptom of breast cancer, such as a lump or nipple discharge. It is important to report any new symptom to your health care provider. A deductible/co-pay will usually apply for diagnostic mammography. But again, it depends on where you live and your insurance plan.
