Crystallization of polymers is a process associated with partial alignment of their molecular chains. These chains fold together and form ordered regions called lamellae, which compose larger spheroidal structures named spherulites. Polymers can crystallize upon cooling from melting, mechanical stretching or solvent evaporation. Crystallization affects optical, mechanical, thermal and chemical ...

Unfortunately, as useful as the periodic table is, most cathode materials are compounds, and are not suited for such a chart. Figure 2 is a fairly comprehensive form of a popular chart, depicting average electrode potential against experimentally accessible (for anodes and intercalation cathodes) or theoretical (for conversion cathodes) capacity. . This allows the reader to evaluate various ...
