Pharmacokinetics is “what the body does to the drug”. On the other hand, Pharmacodynamics is “what the drug does to the body”. 5. Simply, Pharmacokinetics is the body’s action on the drug or alteration of a drug by the body. While Pharmacodynamics is the drug action on the body. 6.Example of Pharmacokinetics and Pharmacodynamics

In this review we will concentrate on the pharmacokinetics of each group in turn and then discuss the pharmacodynamics of the class as a whole. The focus is primarily on the older tetracyclines as there are a number of reviews of tigecycline already published and more importantly new data will become available for this drug over the next few years.

Pharmacodynamics Scholarly Journal  
Pharmacodynamics is the branch of pharmacology that deals with the biochemical and physiological effects of the drugs on the body. In simple words it is defined as the branch that studies what a drug does to the body when it is being administered into the system.

Pharmacology deals with all aspects of the interaction of chemicals with biological systems, and psychopharmacology refers to the interactions of drugs that are used primarily because of their effects on the central nervous system (CNS). Pharmacologists often divide their science into two main parts: pharmacokinetics and pharmacodynamics.
