These technologies have received a great deal of attention and gradually begun to infiltrate biochemistry and cell biology laboratories. The term proteome was introduced for the first time in 1994 at the first Proteome meeting in Siena, Italy, and was used to describe the protein complement of a genome. Proteomics can be defined as "a large ...

Molecular biology. A study into the molecular basis of living systems, molecular biology aims to understand, at the most basic level possible, the nature and interactions of the units that make up living organisms. A popular branch of molecular biology involves the study of DNA, with the goal of sequencing or mutating it in order to study the effects and possibilities of these processes.
