Solution to Problem B. This problem is slightly more complicated than Problem A since refraction is taking place at two boundaries. This is an example of a layer problem where the light refracts upon entering the layer (boundary #1: air to crown glass) and again upon leaving the layer (boundary #2: crown glass to air). Despite this complication, the solution begins like the above problem: a ...

Inquiry-based learning (also spelled as enquiry-based learning in British English) is a form of active learning that starts by posing questions, problems or scenarios. It contrasts with traditional education, which generally relies on the teacher presenting facts and their own knowledge about the subject.Inquiry-based learning is often assisted by a facilitator rather than a lecturer.

**Inquiry-based learning - Wikipedia**  
In this course, students learn problem solving strategies and test-taking tactics over two lessons — during each lesson, class will meet over a 3-hour period, with a half-hour break in the middle. The course also includes a practice AMC 8 test. This course covers entirely different problems than the Special AMC 8 Problem Seminar B.

Problem Solving: Choose the Operation What Is It? The process of "choosing the operation" involves deciding which mathematical operation (addition, subtraction, multiplication, or division) or combination of operations will be useful in solving a word problem.For example, one way to solve the following problem is to think of it as a problem of subtraction, e.g.:
